Withdraw Cash

This feature allows an account holder to withdraw cash from an ATM.

Background:
Scenario: Withdraw without typing the write PIN
Scenario Outline: Withdraw cash

Features details

Withdraw Cash

This feature allows an account holder to withdraw
cash from an ATM.

Background:

These are the assumptions that we are making
for the following scenarios:
* I have $200 in my account
* There is $500 in the ATM

Scenario: **Withdraw without typing the write PIN**

This scenario checks whether the Withdraw Cash feature
has any security checks in place before dispensing
the cash to the user.
Given I did not input my correct PIN
When I try to withdraw $200 from my account
Then the ATM should display "You did not input the correct PIN"
And the ATM should not dispense any amount

Scenario Outline: **Withdraw cash**

This scenario checks whether the ATM will dispense
the correct amount and complain if an incorrect amount
is given by the user.
Given I typed in my correct PIN
When I try to withdraw from my account
Then the ATM should dispense
Examples:

Requested Amount	Dispensed Amount
$200	$200
$900	$0
